PURPOSE

The Second National Flood Workshop is organized by Weather Research Center (a private, non-profit educational and research center based in Houston, Texas) and its partners. The purpose of this workshop is to bring together various agencies, emergency managers, academia, and professionals from across the nation to encourage dialogue on the various aspects of flooding. This includes the meteorological and hydrological conditions before, during, and after flood events, technological advancements being made in remote data acquisition, flood modeling, and regulations and requirements in flood mitigation and floodplain management. Coastal and offshore operations are also impacted by flood events especially storm surge and high tides from tropical storm and hurricane events which can cause flooding and damage. This year's conference will add a track where coastal and offshore facilities affected by tropical storm and hurricane events can come together and discuss flooding impacts on their operations.
